WEB CV: [vladika.net](#)

Software Engineer specializing in Python and Go, experienced with backend systems, and DevOps practices. Strong foundation in full stack development, with a focus on building scalable, efficient solutions. Quick to learn, motivated, and eager to contribute to the creation of challenging projects

Professional Experience

Software Engineer - Talos IT EOOD

(Feb 2024 - Feb 2026)

Skills: Python, Go, DevOps, Back-End Development, Automation

- Created software to automate system administration, saving 200+ man-hours on a weekly base reducing manual workload and improving efficiency
- Facilitated incident response by diagnosing and troubleshooting hardware, software issues.
- Architected a CI/CD pipeline for a multi service application, using Dockerized builds and automated integration tests to enforce 90%+ code coverage and cut deployment time by 40%
- Integrated multithreading in load by ~30% using Golang microservices to offload DB reads
- Wrote clean, efficient code in Python and Go to deliver scalable software solutions

Freelance Developer

(Oct 2023 - Jan 2024)

Skills: Python, Go, JS, React, Express, Full-Stack Development, Automation, Content Creation,

- Developed RESTful APIs using Express and powering a React+Vite application for real-time tracking, inventory visibility, and allocation workflows
- Automated social media messaging and calendar scheduling, reducing manual outreach time by 80% while optimizing AI content prompts to increase audience engagement by 20% and boost traffic by 15%
- Developed a full-stack web application using FastAPI for RESTful APIs, Django for server-side rendering, and integrated Google Firebase Authentication for secure user management. Utilized Python for backend
- Engineered Go driven Playwright pipelines to extract and analyze competitor marketplace data, enabling automated dynamic pricing.

Education

Bachelor of Computer Science (Hons)

(Sep 2022 - May 2026)

Griffith College, Dublin 8

- Mastered core programming with (Python, Java) data structures, algorithms, and OOP principles.
- Gained exposure to databases and SQL query (MySQL, PostgreSQL, LiteSQL)
- Created web base full-stack development projects with (JS, PHP, React, Node, Express, MongoDB)
- Good understanding of software development processes (CI/CD, AWS, Git, GitLab, Unit Testing)
- Have experience working with Concurrent development (multi-threading)
- Working knowledge of Networks and Numerical Optimization with Python
