EXPERIENCE

Talos EOOD

Software Engineer

Feb 2024 – Jun 2026

Python DevOps Back-End Development Automation

- Designed and implemented an internal developer CLI automation tool for bulk infrastructure operations, eliminating repetitive manual tasks and saving 100+ engineering hours per month.
- Implemented CI/CD pipelines using GitHub Actions and ArgoCD, enabling automated testing, progressive delivery, and reducing deployment cycles by 40 percent.
- Designed and maintained a microservices-based Golang architecture supporting high traffic web platforms, implementing service separation for user management, content delivery, payments, and analytics.
- Optimised PostgreSQL and Redis performance through query tuning, indexing, caching strategies, and replication setup.

LordEast

Full-Stack Developer

Oct 2022 – Jan 2024

Python JavaScript React Express Automation

- Developed a full stack company catalog platform using FastAPI and Django, enabling structured browsing and management of company listings with secure Firebase Authentication for user management workflows.
- Developed a Golang based service daemon to continuously monitor competitor pricing data and trigger updates for dynamic pricing adjustments.
- Developed Python backend services to automate inventory management and stock synchronization.
- Containerized applications with Docker to create consistent development and deployment environments.

PROJECTS

valueTracker

Jupyter Notebook, Python, TensorFlow, Kotlin, Matplotlib, NumPy, Pandas

- Engineered a Transfer Learned Convolutional Neural Network (CNN) on the Labeled Food datasets, enabling on-device food image recognition for nutritional tracking.
- Implemented local TensorFlow Lite inference within a Kotlin Android application for real-time food classification from camera, minimizing latency and network dependency.
- Containerized the machine learning development environment using Docker, ensuring reproducible model training and dependency management for the CNN.

Home k8s Cluster Server

Go CI/CD Docker Kubernetes Ansible Terraform ArgoCD Networking Metrics Grafana

- Established a local Kubernetes development environment with ArgoCD, enabling rapid, GitOps-driven application deployment and state synchronization for testing.
- Configured firewall rules, DNS, private VPN and networking for the local Kubernetes environment, establishing secure and functional connectivity for containerized applications.
- Integrated Grafana to visualize metrics and logs from locally running applications, providing immediate observability into cluster health during development and testing.
- Deployed and managed instances of both stateful and stateless containers within the local Kubernetes environment, including local instances of Redis and PostgreSQL for testing and workload validation.

EDUCATION

Griffith College

Dublin 8

B.Sc. (Hons) Computer Science GPA: First Class Honours

Sep 2022 – 2026

Python Java SQL PostgreSQL SQLite JavaScript React Node Express MongoDB CI/CD AWS Git GitLab

- Mastered core programming (Python, Java), data structures, algorithms, OOP
- Exposure SQL databases (MySQL, PostgreSQL, SQLite)
- Built full-stack web projects JS, PHP, React, Node, Express, MongoDB
- Solid grounding CI/CD, AWS, Git/GitLab, unit testing practices
